

AI Use Declaration

For this lab I used Claude as learning assistants. I used them in three ways:

1. To understand the four parts of RAG - chunking, embedding, retrieval, and generation - because the notebook instructions were new to me.
2. To check my English when I wrote my predictions and my final summary, so the wording was clear and correct.
3. To help me fix a technical error in Google Colab when the transformers library did not import correctly.

I ran every cell in the notebook myself in Google Colab. I wrote my own predictions before each cell, and I compared them with the real outputs. All final answers in this notebook are based on the outputs I saw myself. I did not use AI to generate the model outputs or to fake any results.
